

Aerial Work Platforms

Aerial Work Platforms - There are various forklift accessories accessible on the market. They can help transform your lift truck so that you could expand your ability to pick items up or finish clean up tasks and material handling with greater ease.

Many of the attachments are specifically designed in order to fit on the blades themselves. Blade extensions for example, are utilized if you need a lot more fork length, that increases lifting capacity. Fork extensions come in lengths varying from forty eight to one hundred twenty inches. Triangular or rounded accessories are another type utilized whenever moving rolled material to be able to ensure it does not roll off of the typical flat blades.

Examples of lifting accessories consist of pivoting and telescoping boom or crane accessories. They can come in a number of different styles and are most often meant for transferring poles, metal bars, lumber and different types of bulky stuff. Additional accessories such as other kinds of hook plates and hooks are offered so as to lift things with a sling or chain. Magnetic lifters and slab lifters are other items which could be used together with hook accessories. Slab lifters are specialized attachments which are meant for picking up a variety of materials which are delivered in a sheet or slab format. Rug rams or carpet poles are other lifting tools that attach to your lift truck to make transporting rolls of carpet easier. The attachment hooks onto the forklift's forks and has a pole that goes through the middle of the carpet roll.

There are many different types of forklift accessories that could be used for facility maintenance like for example snow forks. These blades attach to front end loaders and could move materials like for instance soil, snow and dirt. Other common cleanup accessories consist of magnetic sweepers and standard sweepers. Standard sweepers includes a broom which the lift truck forks connect onto for sweeping big spaces like for example warehouse, factory floors and parking lots. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is used in places where there is lots of metal debris such as on shop floors for instance. Sweepers have widths up to 60 inches and this surface area makes clean up effortless and fast.

A material spreader is one more forklift accessory which is normally used at facilities. These spreaders are handy for various applications such as spreading insecticides, seeds, ice melt, rock salt, pellets and fertilizers.

Another optional lifting attachment are work platforms. These can be used by numerous different companies day after day. Platforms may differ in size from 36" x 36" to up to 60" x 60". Some units may be existing and are capable of folding up and storing into a smaller place. Work platforms are designed to raise staff up to an overhead location using the forklift. Larger platform units have additional space for staff to be able to bring tools and other necessary items for the task. Often work platforms are made of steel or ploy material.
