

Barrel Clamp

Barrel Clamps - A Barrel Clamp is actually a hydraulic or mechanical accessory for a lift truck. It could be used in order to grip the item you would like to transfer with the lift truck and is often used for handling barrels, kegs and paper rolls. Some types of barrel clamp accessories even have a rotate function. Like for example, the revolving function enables the person operating the forklift to be able to slot in a vertically stored paper inside the horizontal intake of a printing press.
